

Recombinant Mouse CD36/SCARB3 Protein (His & Fc Tag)

Catalog Number:PKSM040690

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms	FAT;GPIV;Scarb3
Species	Mouse
Expression Host	HEK293 Cells
Sequence	Gly 30-Lys 439
Accession	NP_001153030.1
Calculated Molecular Weight	74.5 kDa
Observed molecular weight	110-120 kDa
Tag	C-His-Fc
Bioactivity	Immobilized human RSPO1 at 20 µg/ml (100 µl/well) can bind mouse CD36 Fc chimera with a linear ranger of 6. 4-800 ng/ml.

Properties

Purity	> 88 % as determined by reducing SDS-PAGE.
Endotoxin	< 1.0 EU per µg of the protein as determined by the LAL method.
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from sterile PBS, pH 7.4 Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization. Please refer to the specific buffer information in the printed manual.
Reconstitution	Please refer to the printed manual for detailed information.

Data

> 88 % as determined by reducing SDS-PAGE.

Background

The cluster of differentiation (CD) system is commonly used as cell markers in immunophenotyping. Different kinds of cells in the immune system can be identified through the surface CD molecules which associating with the immune function of the cell. There are more than 320 CD unique clusters and subclusters have been identified. Some of the CD molecules serve as receptors or ligands important to the cell through initiating a signal cascade which then alter the behavior of the cell. Some CD proteins do not take part in cell signal process but have other functions such as cell adhesion. Cluster of differentiation 36 (CD36), also known as FAT, SCARB3, GP88, glycoprotein IV (gpIV) and

Recombinant Mouse CD36/SCARB3 Protein (His & Fc Tag) ^{dg}

Catalog Number:PKSM040690

glycoprotein IIIb (gpIIIb), is a member of the CD system as well as the class B scavenger receptor family of cell surface proteins. CD36 can be found on the surface of many cell types in vertebrate animals and it consists of 472 amino acids and is extensively glycosylated. It is an integral membrane protein primarily serving as receptors for thrombospondin and collagen and by the erythrocytes infected with the human malaria parasite. The role of CD36 as a cell surface receptor has been extended to that of a signal transduction molecule.
