# **Recombinant Human SIGLEC5 Protein (Fc Tag)**

Catalog No. PKSH031000

Note: Centrifuge before opening to ensure complete recovery of vial contents.

## **Description**

Synonyms Sialic acid-binding Ig-like lectin 5;Siglec-5;CD33 antigen-like 2;Obesity-binding

protein 2;OB-BP2;CD170;CD33L2;OB-BP2;OBBP;OBBP2;SIGLEC-5;SIGLEC5

Species Human

**Expression Host** HEK293 Cells **Sequence** Met 1-Thr 434

AccessionO15389Calculated Molecular Weight73.4 kDaObserved molecular weight74-93 kDaTagC-hFc

**Bioactivity** Not validated for activity

## **Properties**

**Purity** > 90 % as determined by reducing SDS-PAGE.

**Endotoxin** < 1.0 EU per μg of the protein as determined by the LAL method.

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation** Lyophilized from sterile PBS, pH 7.4

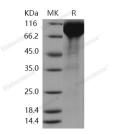

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed manual.

**Reconstitution** Please refer to the printed manual for detailed information.

## Data

 $>\!90~\%$  as determined by reducing SDS-PAGE.

# Background

SIGLEC5 contains 2 Ig-like C2-type (immunoglobulin-like) domains and 1 Ig-like V-type (immunoglobulin-like) domain.

A Reliable Research Partner in Life Science and Medicine

It belongs to the immunoglobulin superfamily and SIGLEC (sialic acid binding Ig-like lectin) family. SIGLEC5 is expressed by monocytic/myeloid lineage cells. It is found at high levels in peripheral blood leukocytes; spleen; bone marrow and at lower levels in lymph node; lung; appendix; placenta; pancreas and thymus. It is also expressed by monocytes and neutrophils but absent from leukemic cell lines representing early stages of myelomonocytic differentiation. SIGLEC5 is a putative adhesion molecule that mediates sialic-acid dependent binding to cells. It binds equally to alpha-2;3-linked and alpha-2;6-linked sialic acid. The sialic acid recognition site may be masked by cis interactions with sialic acids on the same cell surface.
