

Recombinant Human CD226/DNAM-1 Protein (His Tag)

Catalog Number:PKSH031523

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms	DNAM-1;DNAM1;PTA1;TLISA1
Species	Human
Expression Host	HEK293 Cells
Sequence	Met 1-Asn 247
Accession	NP_006557.2
Calculated Molecular Weight	27.6 kDa
Observed molecular weight	40-50 kDa
Tag	C-His
Bioactivity	Immobilized human CD226 at 2 µg/ml (100 µl/well) can bind human CD112 with a linear ranger of 6. 4-800 ng/ml.

Properties

Purity	> 97 % as determined by reducing SDS-PAGE.
Endotoxin	< 1.0 EU per µg of the protein as determined by the LAL method.
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from sterile PBS, pH 7.4 Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization. Please refer to the specific buffer information in the printed manual.
Reconstitution	Please refer to the printed manual for detailed information.

Data

> 97 % as determined by reducing SDS-PAGE.

Background

The cluster of differentiation (CD) system is commonly used as cell markers in immunophenotyping. Different kinds of cells in the immune system can be identified through the surface CD molecules which associating with the immune function of the cell. There are more than 320 CD unique clusters and subclusters have been identified. Some of the CD molecules serve as receptors or ligands important to the cell through initiating a signal cascade which then alter the behavior of the cell. Some CD proteins do not take part in cell signal process but have other functions such as cell adhesion. CD226; also known as PTA1 or DNAM-1; is a member of the immunoglobulin superfamily containing 2 Ig-like

domains of the V-set. High rate of CD226 (Cluster of Differentiation 226) is found on the surface of natural killer cells; platelets; monocytes and a subset of T cells. CD226 have binding sites with CD112 and CD155 and mediate cellular adhesion to other cells containing its ligands.
