Recombinant Human EphB6 Protein (His Tag)

Catalog No. PKSH031774

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description	
Synonyms	HEP
Species	Human
Expression Host	HEK293 Cells
Sequence	Met 1-Ser 579
Accession	NP_004436.1
Calculated Molecular Weight	61.6 kDa
Observed molecular weight	60-70 kDa
Tag	C-His
Bioactivity	 Immobilized recombinant human EphB6 at 10 μg/ml (100 μl/well) can bind human EphrinB1 with a linear range of 32-800 ng/ml. Immobilized recombinant human EphB6 at 10 μg/ml (100 μl/well) can bind human EphrinB2 with a linear range of 1. 28-32 ng/ml.
Properties	
Purity	> 92 % as determined by reducing SDS-PAGE.
Endotoxin	< 1.0 EU per μ g of the protein as determined by the LAL method.
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from sterile PBS, pH 7.4 Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization. Please refer to the specific buffer information in the printed manual.
Reconstitution	Please refer to the printed manual for detailed information.
Data	

Data

> 92 % as determined by reducing SDS-PAGE.

Background

Ephrins are divided into the ephrin-A (EFNA) class and the ephrin-B (EFNB) class based on their structures and sequence relationships. Ephrin receptors make up the largest subgroup of the receptor tyrosine kinase (RTK) family. EphB6 is an unusual Eph receptor; lacking catalytic capacity due to alterations in its kinase domain. Interestingly; increased metastatic activity is associated with reduced EphB6 receptor expression in several tumor types; including breast cancer. This emphasizes the potential of EphB6 to act as a suppressor of cancer aggressiveness. EphB6 suppress cancer invasiveness through c-Cbl-dependent signaling; morphologic changes; and cell attachment and indicate that EphB6 may represent a useful prognostic marker and a promising target for therapeutic approaches. EphB6 can both positively and negatively regulate cell adhesion and migration; and suggest that tyrosine phosphorylation of the receptor by an Src family kinase acts as the molecular switch for the functional transition. In addition; Ephrin-B2 may be a physiological ligand for the EphB6 receptor.
