Recombinant Human Fibronectin/FN Protein

Catalog Number:PKSH032450

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms Fibronectin;FN1;CIG;ED-B;FINC;FN;FNZ;GFND;GFND2;LETS;MSF

Species Human Expression Host E.coli

Sequence Pro1270-Ser1546&Ala1721-Thr2016

Accession P02751
Calculated Molecular Weight 62.7 kDa
Observed molecular weight 60-80 kDa
Tag None

Properties

Purity > 95 % as determined by reducing SDS-PAGE.

Endotoxin < 0.01 EU per μg of the protein as determined by the LAL method.

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

Shipping This product is provided as lyophilized powder which is shipped with ice packs.

Formulation Lyophilized from a 0.2 µm filtered solution of 12.5 mM Citric acid, 1.25% Sucrose,

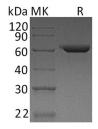

0.1% Tween80, pH 5.5.

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization. Please refer to the specific buffer

Reconstitution Please refer to the printed manual for detailed information.

Data

> 95 % as determined by reducing SDS-PAGE.

Background

Fibronectin1(FN1) is a secreted protein and contains 12 fibronectin type-I domains; fibronectin type-II domains and 16 fibronectin type-III domains. Recombinant human fibronectin fragment; is a protein of ~63 kDa containing a central cell-binding domain; a high affinity heparin-binding domain II; and CS1 site within the alternatively spliced III CS region of human fibronectin. Cells bind to a VLA-4 ligand; a CS-I site; and a VLA-5 ligand; a cell attachment domain; and virus vectors binds to a heparin binding domain II; which co-locates the cell and the virus vector on NovoNectin. This process enhances the density of both cells and vectors; and facilitates the gene transduction in the result.
