## Recombinant Human IL-17A&IL-17F Heterodimer Protein (His Tag)

Catalog Number: PKSH032619

Note: Centrifuge before opening to ensure complete recovery of vial contents.

#### **Description**

Synonyms IL-17A/F Heterodimer;IL-17A&IL-17F Heterodimer

Species Human

Expression Host HEK293 Cells

Sequence Gly24-Ala155&Arg31-Gln163

**Accession** Q16552&AAH70124.1

Calculated Molecular Weight 15.1&16 kDa

Observed molecular weight 15-25 kDa

Tag C-His

**Bioactivity** Loaded Biotinylated Human IL-17RA-His-Avi on SA Biosensor, can bind Human

IL-17A&17F-His with an affinity constant of 8.6 pM as determined in BLI assay.

#### **Properties**

**Purity** > 95 % as determined by reducing SDS-PAGE.

**Endotoxin** < 1.0 EU per µg of the protein as determined by the LAL method.

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

Shipping This product is provided as lyophilized powder which is shipped with ice packs.

Formulation Lyophilized from a 0.2 μm filtered solution of 20mM PB, 150mM NaCl, 1mM

EDTA, pH 7.4.

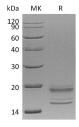

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the p

**Reconstitution** Please refer to the printed manual for detailed information.

#### Data

> 95 % as determined by reducing SDS-PAGE.

#### **Background**

The IL-17 family include IL-17A, IL-17B, IL-17C, IL-17D, IL-17E (also called IL-25), and IL-17F. The family is comprised of at least six proinflammatory cytokines that share a conserved cysteine-knot structure but diverge at the N-terminus. All members of the IL-17 family have a similar protein structure, with four highly conserved cysteine residues critical to their 3-dimensional shape, yet they have no sequence similarity to any other known cytokines. IL-17 family members are glycoproteins secreted as dimers that induce local cytokine production and recruit granulocytes to sites of

inflammation. IL-17 is induced by IL-15 and IL-23, mainly in activated CD4+ T cells distinct from Th1 or Th2 cells. IL-17F is the most homologous to IL-17, but is induced only by IL-23 in activated monocytes.
