Recombinant Human TXLNA Protein (His Tag)

Catalog No. PKSH033255

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms Alpha-Taxilin;TXLNA;TXLN

Species Human
Expression Host E.coli

Sequence Met 1-Lys162

AccessionP40222Calculated Molecular Weight20.4 kDaObserved molecular weight30 kDa

Tag N-His & C-His

Bioactivity Not validated for activity

Properties

Purity > 95 % as determined by reducing SDS-PAGE.

Endotoxin < 1.0 EU per µg of the protein as determined by the LAL method.

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

Shipping This product is provided as lyophilized powder which is shipped with ice packs.

Formulation Lyophilized from a 0.2 µm filtered solution of PBS, pH 7.4.

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed manual.

Reconstitution Please refer to the printed manual for detailed information.

Data

> 95 % as determined by reducing SDS-PAGE.

Background

 α -Taxilin belongs to the taxilin family. α -Taxilin exists in almost all tissues, with higher expression levels observed in the heart, kidney, liver, and pancreas. α -Taxilin binds to the C-terminal coiled coil region of syntaxin family members

STX1A, STX3A, and STX4A, but not when these proteins are complexed with SNAP25, VAMP2 or STXBP1, suggesting that it interacts with syntaxins that do not form the SNARE complex. It is shown that α -Taxilin plays multiple roles in the generation and maintenance of neurons through modulation of the NAC-mediated translational machinary and/or the syntaxin-mediated vesicle traffic in the soma. In addition, α-Taxilin may be involved in intracellular vesicle traffic and potentially in calcium-dependent exocytosis in neuroendocrine cells.
