

Recombinant Mouse PGK1/PGKA Protein (His Tag)

Catalog No. PKSM040299

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms	Pgk-1
Species	Mouse
Expression Host	Baculovirus-Insect Cells
Sequence	Met 1-Val 417
Accession	P09411
Calculated Molecular Weight	46.0 kDa
Observed molecular weight	43 kDa
Tag	C-His
Bioactivity	Kinase activity untested

Properties

Purity	> 95 % as determined by reducing SDS-PAGE.
Endotoxin	< 1.0 EU per µg of the protein as determined by the LAL method.
Storage	Store at < -20°C, stable for 6 months. Please minimize freeze-thaw cycles.
Shipping	This product is provided as liquid. It is shipped at frozen temperature with blue ice/gel packs. Upon receipt, store it immediately at < -20°C.
Formulation	Supplied as sterile solution of 20mM Tris, 500mM NaCl, pH 7.4
Reconstitution	Not Applicable

Data

> 95 % as determined by reducing SDS-PAGE.

Background

Phosphoglycerate kinase 1(PGK1) is an enzyme. It is mainly expressed in spermatogonia and Localized on the principle piece in the sperm. Its expression significantly decreased in the testis of elderly men. PGK1 involved in a critical energy-producing process known as glycolysis. It helps carry out a chemical reaction that converts a molecule called 1,3-diphosphoglycerate, which is produced during the breakdown of glucose, to another molecule called 3-phosphoglycerate during glycolysis. PGK1 may also act as a cofactor for polymerase alpha. The protein has been identified as a moonlighting protein based on its ability to perform mechanistically distinct functions.
