

Recombinant Mouse ALK-1/ACVRL1 Protein (His & Fc Tag)

Catalog No. PKSM040803

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms Serine/threonine-protein kinase receptor R3;SKR3;Activin receptor-like kinase

1;ALK-1;TGF-B superfamily receptor type I;TSR-I;ACVRL1;activin A receptor

type II-like 1;activin A receptor

Species Mouse

Expression Host
Sequence
Met 1-Pro 119
Accession
NP_033742.2
Calculated Molecular Weight
Observed molecular weight
Tag
HEK293 Cells
Met 1-Pro 119
NP_033742.2
Calculated Molecular Weight
59-055 kDa
C-His-Fc

Bioactivity Measured by its ability to inhibit BMP9-induced alkaline phosphatase production by

MC3T3E1 mouse chondrogenic cells. David, L. et al. (2007) Blood 109:1953. The ED50 for this effect is typically 60-300 ng/mL in the presence of 2 ng/mL of

recombiant human BMP9.

Properties

Purity > 95 % as determined by reducing SDS-PAGE.

Endotoxin < 1.0 EU per μg of the protein as determined by the LAL method.

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

Shipping This product is provided as lyophilized powder which is shipped with ice packs.

Formulation Lyophilized from sterile PBS, pH 7.4

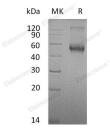

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed manual.

Reconstitution Please refer to the printed manual for detailed information.

Data

> 95 % as determined by reducing SDS-PAGE.

Background

Activin A receptor, type II-like 1 (ACVRL1), also known as ALK-1 (activin receptor-like kinase 1), is an endothelialspecific type I receptor of the TGF-beta (transforming growth factor beta) receptor family of ligands. On ligand binding, a heteromeric receptor complex forms consisting of two type II and two type I transmembrane serine/threonine kinases. ACVRL1 protein is expressed in certain blood vessels of kidney, spleen, heart and intestine, serving as an important role during vascular development. Mutations in ACVRL1 gene are associated with hemorrhagic telangiectasia type 2, also known as Rendu-Osler-Weber syndrome 2 and vascular disease.
