Background CDw119 is a 90 kD immunoglobulin superfamily member, also known as IFN-γRα chain. It is a

> class II cytokine receptor family member that serves as a IFN-y-binding chain associated with the IFN-γ β chain also known as AF-1. In addition to ligand binding, CDw119 participates in ligand trafficking. CDw119 is expressed on T and B cells, NK cells, fibroblasts, endothelial, and epithelial cells. Binding of IFN-y induces receptor dimerization, internalization, Jak1 and Jak2 protein kinase activation and, ultimately, STAT1 activation. IFN-γ initiates and regulates a variety

of immune responses.

Recommended usage

Each lot of this antibody is quality control tested by flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is $\leq 2.0~\mu g$ per 10^6 cells in $100~\mu L$ volume or $100~\mu L$ of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.
