Recombinant Human EPCR Protein (His Tag)

Catalog Number: PKSH033300

Note: Centrifuge before opening to ensure complete recovery of vial contents.

.	4.0
Descri	ntion
DCSCII	

Synonyms Endothelial Protein C Receptor; Activated Protein C Receptor; APC

Receptor; Endothelial Cell Protein C Receptor; CD201; PROCR; EPCR

Species Human

Expression Host
Sequence
Ser18-Ser210
Accession
Q9UNN8
Calculated Molecular Weight
Observed molecular weight
Tag
HEK293 Cells
Ser18-Ser210
Q9UNN8
23.1 kDa
C-His

Properties

Purity > 95 % as determined by reducing SDS-PAGE.

Endotoxin < 1.0 EU per µg of the protein as determined by the LAL method.

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

Shipping This product is provided as lyophilized powder which is shipped with ice packs.

Formulation Lyophilized from a 0.2 μm filtered solution of 20mM PB, 150mM NaCl, pH 7.2.

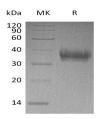

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed man

Reconstitution Please refer to the printed manual for detailed information.

Data

> 95 % as determined by reducing SDS-PAGE.

Background

Endothelial Protein C Receptor (EPCR) is a Vitamin K-dependent Serine Protease that plays a major role in blood coagulation. Binding of Protein C to EPCR leads to the proteolytic activation of PAR1 (Protease-Activated Receptor 1) on endothelial cells and subsequent up-regulation of Protein C-induced genes. EPCR is a type I transmembrane glycoprotein in the CD1/MHC family. It is expressed most strongly in the endothelial cells of arteries and veins in heart and lung. Membrane bound EPCR is released by metalloproteolytic cleavage to generate the soluble receptor. The extracellular domain of human and mouse EPCR shares approximately 61% amino acid sequence homology. EPCR plays an important role in augmenting Protein C activation by the Thrombin-Thrombomodulin complex and in regulating blood

coagulation and inflammation. EPCR is found primarily on endothelial cells. Deletion of EPCR function results in embryonic death; at least in part due to placental thrombosis.
