Background

R-spondin-3 (RSPO3); also known as Protein with TSP type-1 repeat; Roof plate-specific spondin-3; Thrombospondin type-1 domain-containing protein 2; PWTSR; THSD2 and CRISTIN1; is a member of the thrombospondin type 1 repeat supergene family. RSPO3 is a secreted protein and widely expressed in many tissues. RSPO3 contains two Furin-like repeats which have been found in a variety of eukaryotic proteins involved in the mechanism of signal transduction by receptor tyrosine kinases; and one TSP type-1 domain; RSPO3 functions as a activator of the beta-catenin signaling cascade; leading to TCF-dependent gene activation. Otherwise; RSPO3 may negatively regulate the TGF-beta pathway.
