Uniprot ID P31994

Background CD32 is a 40 kD polymorphic transmembrane glycoprotein also known as FcyRII and FCRII. It is

> an immunoglobulin superfamily member expressed on monocytes/macrophages, granulocytes, platelets and B cells. There are at least 6 isoforms of CD32 resulting from alternative mRNA splicing. CD32 mediates phagocytosis and oxidative burst in granulocytes, as well as platelet aggregation and immunomodulation. The extracellular domain of CD32 binds to polymeric and aggregated IgG and immune complexes, while the intracellular domain has been reported to

associate with SHP-1 (B1 isoform).

Fluorophore

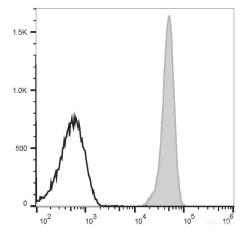

Conjugation: Elab Fluor® 647

Elab Fluor $^{\otimes}$ 647 is designed to be excited by the Red laser (627-640 nm) and detected using an optical filter centered near 670 nm (e.g., a 660/20 nm bandpass filter).

Recommended usage

Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5 μ L of antibody per test (million cells in 100 μ L staining volume or per 100 μ L of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.

Product data

Human peripheral blood granulocytes are stained with Elab Fluor[®] 647 Anti-Human CD32 Antibody[IV-3] (filled gray histogram) or Elab Fluor[®] 647 Mouse IgG2b, κ Isotype Control (empty black histogram).
