Background CD48 is a 45 kD GPI-anchored glycoprotein also known as BCM1, Blast-1 (human), and OX-45

(rat). It is a member of the Ig superfamily, expressed on T and B cells and

monocytes/macrophages. It plays a role in adhesion and T cell recognition. The primary ligands

for CD48 are CD2 and CD244.

Fluorophore

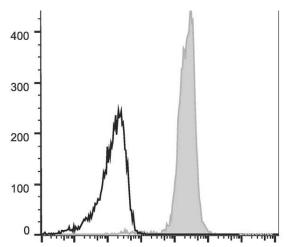

Conjugation: Elab Fluor[®] 647

Elab Fluor $^{\odot}$ 647 is designed to be excited by the Red laser (627-640 nm) and detected using an optical filter centered near 670 nm (e.g., a 660/20 nm bandpass filter).

Recommended usage

Each lot of this antibody is quality control tested by flow cytometric analysis. Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use. We suggest each investigator should titrate the reagent to obtain optimal results [The recommended concentration is $0.1-1~\mu g/10^6$ cells in $100~\mu L$ volume].

Product data

C57BL/6 murine splenocytes are stained with Elab Fluor[®] 647 Anti-Mouse CD48 Antibody (filled gray histogram). Unstained splenocytes (empty black histogram) are used as control.
