**Uniprot ID** P15379,P16070

**Background** CD44 is a 80-95 kD glycoprotein also known as Hermes, Pgp1, H-CAM, or HUTCH. It is

expressed on all leukocytes, endothelial cells, hepatocytes, and mesenchymal cells. As B and T cells become activated or progress to the memory stage, CD44 expression increases from low or mid levels to high levels. Thus, CD44 has been reported to be a valuable marker for memory cell subsets. High CD44 expression on Treg cells has been associated with potent suppressive function via high production of IL-10. CD44 is an adhesion molecule involved in leukocyte attachment to and relling on and thelial cells, homing to peripheral lumphoid organs and to the sites of

and rolling on endothelial cells, homing to peripheral lymphoid organs and to the sites of

inflammation, and leukocyte aggregation.

# **Fluorophore**

Conjugation: Elab Fluor® 647

Elab Fluor $^{\odot}$  647 is designed to be excited by the Red laser (627-640 nm) and detected using an optical filter centered near 670 nm (e.g., a 660/20 nm bandpass filter).

### Recommended usage

Each lot of this antibody is quality control tested by flow cytometric analysis. Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use. We suggest each investigator should titrate the reagent to obtain optimal results [The recommended concentration is 0.1-1  $\mu g/10^6$  cells in  $100~\mu L$  volume].

### **Product data**

C57BL/6 murine splenocytes are stained with Elab Fluor<sup>®</sup> 647 Anti-Human/Mouse CD44 Antibody (filled gray histogram). Unstained splenocytes (empty black histogram) are used as control.
