## **Antigen Information**

Alternate Names Itga2b,GPalpha Iib,CD41,GPIIb

Uniprot ID Q9QUM0

**Background** CD41, also known as integrin  $\alpha$ 2b and GPIIb, is a transmembrane glycoprotein that is expressed

by platelets and megakaryocytes. It was reported that CD41 is also expressed on hematopoietic progenitors. CD41 associates with CD61 (integrin  $\beta$ 3) to form complexes that interact with fibrinogen, fibronectin, von Willebrand factor, and thrombin. CD41 is required for platelet

adhesion and aggregation. Defect of CD41 leads to disorders of coagulation.

# **Fluorophore**

Conjugation: APC

APC is designed to be excited by the Red (627-640 nm) laser and detected using an optical filter centered near 660 nm (e.g., a 660/20 nm bandpass filter).

## **Recommended usage**

Each lot of this antibody is quality control tested by flow cytometric analysis. Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use. We suggest each investigator should titrate the reagent to obtain optimal results [The recommended concentration is 0.1-1  $\mu g/10^6$  cells in  $100~\mu L$  volume].

#### **Product data**

Mouse platelets are stained with APC Anti-Mouse CD41 Antibody (filled gray histogram). Unstained platelets (empty black histogram) are used as control.
