Antigen Information

Alternate Names	GPI linked surface mucin, Heat stable antigen, HSA, Nectadrin, Signal transducer CD24
Uniprot ID	P25063
Background	CD24 is a 35-45 kD glycosylphosphatidylinositol (GPI)-linked protein also known as heat stable
	antigen (HSA), BA-1, Ly-52, and nectadrin. It is expressed on the surface of B cells (but not
	plasma cells), granulocytes, follicular dendritic cells, and epithelial cells. CD24 may play a role in
	the regulation of B-cell proliferation and maturation. CD24 crosslinking induces a Ca2+ flux in
	mature B cells. CD24 has been shown to interact with CD62P (P-selectin).

Fluorophore

Conjugation: PE/Cyanine5.5

PE/Cyanine5.5 is designed to be excited by the Blue (488 nm), Green (532 nm) and yellow-green (561 nm) lasers and detected using an optical filter centered near 690 nm (e.g., a 690/50 nm bandpass filter).

Recommended usage

Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5 μ L of antibody per test (million cells in 100 μ L staining volume or per 100 μ L of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.
