**Uniprot ID** Q12918

**Background** CD161 is a type II transmembrane glycoprotein, also known as NKR-P1A, that is expressed as a

40-44 kD homodimer. It is a member of the C-type lectin superfamily. CD161 is expressed on a majority of NK cells, NKT cells, and subsets of peripheral T cells and CD3+ thymocytes. It has been reported that Th17 cells are a subpopulation of CD4+CD161+CCR6+ cells. While the biological function of CD161 is not clear, it has been suggested to serve either as a stimulatory receptor or to inhibit NK cell-mediated cytotoxicity and cytokine production. LLT-1 (lectin-like transcript-1, also named as osteoclast inhibitory lectin or CLEC2D) is the ligand of CD161.

## **Fluorophore**

Conjugation: Elab Fluor® 647

Elab Fluor $^{\odot}$  647 is designed to be excited by the Red laser (627-640 nm) and detected using an optical filter centered near 670 nm (e.g., a 660/20 nm bandpass filter).

## **Recommended usage**

Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5  $\mu$ L of antibody per test (million cells in 100  $\mu$ L staining volume or per 100  $\mu$ L of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.

#### **Product data**

Human peripheral blood lymphocytes are stained with Elab Fluor<sup>®</sup> 647 Anti-Human CD161 Antibody and FITC Anti-Human CD4 Antibody (Left). Lymphocytes stained with FITC Anti-Human CD4 Antibody and Elab Fluor<sup>®</sup> 647 Mouse IgG1, κ Isotype Control (Right) are used as control.
