### **Antigen Information**

Alternate Names Mouse major histocompatibility complex (MHC) H-2, MHC I

**Background** The M1/42 antibody reacts with the H-2 MHC class I alloantigens expressed on nucleated cells

from mice of the a, b, d, j, k, s, and u haplotypes (Stallcup, KC et al, 1981). MHC class I is

involved in antigen presentation to T cells expressing CD3/TCR and CD8 proteins.

## **Fluorophore**

Conjugation: APC

APC is designed to be excited by the Red (627-640 nm) laser and detected using an optical filter centered near 660 nm (e.g., a 660/20 nm bandpass filter).

## **Recommended usage**

Each lot of this antibody is quality control tested by flow cytometric analysis. Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use. We suggest each investigator should titrate the reagent to obtain optimal results [The recommended concentration is  $0.1-1~\mu g/10^6$  cells in  $100~\mu L$  volume].

#### **Product data**

C57BL/6 murine splenocytes are stained with APC Anti-Mouse H-2 Antibody (filled gray histogram). Unstained splenocytes (empty black histogram) are used as control.
