A Reliable Research Partner in Life Science and Medicine

Recombinant Human FLT-3/FLK-2 Protein (Fc Tag)

Catalog No. PKSH033543

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms Receptor-Type Tyrosine-Protein Kinase FLT3;FL Cytokine Receptor;Fetal Liver

Kinase-2;FLK-2;Fms-Like Tyrosine Kinase 3;FLT-3;Stem Cell Tyrosine Kinase

1;STK-1;CD135;FLT3;FLK2;STK1

Species Human

Expression Host
Sequence
Asn27-Asn541
Accession
AAI26351.1
Calculated Molecular Weight
Observed molecular weight
Tag
HEK293 Cells
Asn27-Asn541
AAI26351.1
Calculated Molecular Weight
120 kDa
C-Fc

Bioactivity Not validated for activity

Properties

Purity > 95 % as determined by reducing SDS-PAGE.

Endotoxin < 1.0 EU per µg of the protein as determined by the LAL method.

Storage Store at $< -20^{\circ}$ C, stable for 6 months. Please minimize freeze-thaw cycles.

Shipping This product is provided as liquid. It is shipped at frozen temperature with blue

ice/gel packs. Upon receipt, store it immediately at < - 20°C.

Formulation Supplied as a 0.2 µm filtered solution of PBS, pH7.4.

Reconstitution Not Applicable

Data

> 95 % as determined by reducing SDS-PAGE.

Background

The Flt-3 (fms-like tyrosine kinase) receptor, also named Flk-2and Stk-1 is a member of the class III subfamily of receptor tyrosine kinases that also includes KIT, the receptor for SCF and FMS, the receptor for M-CSF. The extracellular region of these receptors contains five immunoglobulin-like domains and the intracellular region contains a split kinase domain. Human Flt-3 cDNA encodes a 993 amino acid (aa) residue type I membrane protein with a 26 aa

residue signal peptide, a 515 aa extracellular domain with 10 potential N-linked glycosylation sites, a 21 aa residue transmembrane domain and a 431 aa residue cytoplasmic domain. Flt-3 expression has been detected in various tissues, including placenta, gonads, and tissues of nervous and hematopoietic origin. Among hematopoietic cells, the expression of Flt-3 was found to be restricted to the highly enriched stem/progenitor cell populations. The ligand for Flt-3 (FL) has been identified to be a transmembrane protein with structural homology to M-CSF and SCF. Recombinant soluble Flt-3/Fc chimeric protein has been shown to bind FL with high affinity and is a potent FL antagonist.
