Recombinant Human BCL2/Bcl-2 Protein (His Tag)

Catalog Number: PKSH033761

Note: Centrifuge before opening to ensure complete recovery of vial contents.

| ynonyms | Apoptosis regulator Bcl-2; BCL2; Apoptosis Regulator Bcl-2; B-cell Lymphoma 2;PPP1R50 |
|-----------------------------|---|
| pecies | Human |
| Expression Host | E.coli |
| Sequence | Met1-Asp211 |
| Accession | P10415 |
| Calculated Molecular Weight | 24.1 kDa |
| Observed molecular weight | 23-27 kDa |
| Гад | C-His |
| Properties | |
| Purity | > 95 % as determined by reducing SDS-PAGE. |
| Endotoxin | < 1.0 EU per µg as determined by the LAL method. |
| Storage | Store at $< -20^{\circ}$ C, stable for 6 months. Please minimize freeze-thaw cycles. |
| Shipping | This product is provided as liquid. It is shipped at frozen temperature with blue ice/gel packs. Upon receipt, store it immediately at < -20° C. |
| Formulation | Supplied as a 0.2 μ m filtered solution of 20mM HEPES, 150mM NaCl, 10%Glycerol, pH8.0. |
| Reconstitution | Not Applicable |

Background

Bcl-2 is a member of a family of proteins that regulates outer mitochondrial membrane permeability. Bcl-2 is an antiapoptotic member that prevents release of cytochrome c from the mitochondria intermembrane space into the cytosol. Bcl-2 is present on the outer mitochondrial membrane and is also found on other membranes in some cell types. BCL-2 is localized to the outer membrane of mitochondria, where it plays an important role in promoting cellular survival and inhibiting the actions of pro-apoptotic proteins. The pro-apoptotic proteins in the BCL-2 family, including Bax and Bak, normally act on the mitochondrial membrane to promote permeabilization and release of cytochrome C and ROS, that are important signals in the apotosis cascade. These pro-apoptotic proteins are in turn activated by BH3-only proteins, and are inhibited by the function of BCL-2 and its relative BCL-XI.
