

# Recombinant Human/Mouse/Rat Irisin/FNDC5 Protein (Fc Tag)

Catalog No. PKSH033806

Note: Centrifuge before opening to ensure complete recovery of vial contents.

### **Description**

**Synonyms** Fibronectin type III domain-containing protein 5; Fibronectin type III repeat-

containing protein 2;Irisin;FNDC5

**Species** Human/Mouse/Rat **Expression Host** HEK293 Cells **Sequence** Asp32-Glu143 Q8NAU1 Accession Calculated Molecular Weight 39.7 kDa Observed molecular weight 50-60 kDa C-Fc

**Bioactivity** Not validated for activity

# **Properties**

Tag

**Purity** > 95 % as determined by reducing SDS-PAGE.

**Endotoxin** < 1.0 EU per µg of the protein as determined by the LAL method.

Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to **Storage** 

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

Shipping This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation** Lyophilized from a 0.2 µm filtered solution of PBS, pH 7.4.

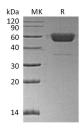

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed manual.

Reconstitution Please refer to the printed manual for detailed information.

#### Data

> 95 % as determined by reducing SDS-PAGE.

# **Background**

Fibronectin type III domain-containing protein 5; the precursor of irisin; is a protein that is encoded by the FNDC5

gene. Human Irisin is synthesized as a 212 amino acid (aa) precursor encoding a type 1 transmembrane protein with a 121 aa extracellular domain (ECD); a 21 aa transmembrane domain; and a 39 aa cytoplasmic domain. The ECD of Irisin contains a fibronectin type III domain and multiple glycosylation sites. The ECD is proteolytically cleaved to release the 112 aa soluble Irisin hormone into circulation. Mature human; mouse share 100% sequence identity. Irisin induces expression of peroxisome proliferatoractivated receptor  $\gamma$  coactivator  $1\alpha$  (PGC1 $\alpha$ ) and uncoupling protein1(UCP1); mitochondrialassociated metabolic proteins. Irisin induces the transition of white adipose tissue into more metabolically active beige adipose tissue. Irisin also regulates neuronal cell differentiation and neurite outgrowth in the brain and is involved in the differentiation of osteoblasts.
