

## Recombinant Human/Mouse/Rat Activin A/INHBA Protein

Catalog No. PKSH033807

*Note:* Centrifuge before opening to ensure complete recovery of vial contents.

## **Description**

Synonyms Inhibin beta A chain;INHBA;Activin A

SpeciesHuman/Mouse/RatExpression HostHEK293 CellsSequenceGly311-Ser426

AccessionP08476Calculated Molecular Weight13 kDaObserved molecular weight15 kDaTagNone

**Bioactivity** Measured by its ability to induce SMAD signaling in 293-Activin A Res cells. The

ED<sub>50</sub> for this effect is 1.3 ng/ml.

# **Properties**

**Purity** > 95 % as determined by reducing SDS-PAGE.

**Endotoxin** < 0.01 EU per  $\mu$ g of the protein as determined by the LAL method.

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation** Lyophilized from a 0.2 μm filtered solution of 4mM HCl.

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed manual.

**Reconstitution** Please refer to the printed manual for detailed information.

#### Data

> 95 % as determined by reducing SDS-PAGE.

# **Background**

Activin and inhibin are two closely related protein complexes that have almost directly opposite biological effects.

Activins, members of the TGF-beta superfamily, are disulfide-linked dimeric proteins originally purified from gonadal fluids as proteins that stimulated pituitary follicle stimulating hormone (FSH) release. Inhibins/activins are involved in regulating a number of diverse functions such as hypothalamic and pituitary hormone secretion, gonadal hormone secretion, germ cell development and maturation, erythroid differentiation, insulin secretion, nerve cell survival, embryonic axial development or bone growth, depending on their subunit composition. Activins are homodimers or heterodimers of the various beta subunit isoforms, while inhibins are heterodimers of a unique alpha subunit and one of the various beta subunits.
