## **Recombinant Mouse IGFBP-7/IGFBP7 Protein (His Tag)**

Catalog No. PKSM041324

Note: Centrifuge before opening to ensure complete recovery of vial contents.

### **Description**

Synonyms Insulin-like growth factor-binding protein 7;IGFBP7;IGF-binding protein 7;IGFBP-

rP1;MAC25 protein;Tumor-derived adhesion factor;TAF;Igfbp7;IBP-7;AGM;Fstl2;Mac25

**Species** Mouse

Expression Host
Sequence
Ser26-Leu281
Accession
Q61581
Calculated Molecular Weight
Observed molecular weight
Tag

HEK293 Cells
Ser26-Leu281
27.2 kDa
27.2 kDa
32-35 kDa
C-His

**Bioactivity** Not validated for activity

#### **Properties**

**Purity** > 95 % as determined by reducing SDS-PAGE.

**Endotoxin** < 1.0 EU per µg of the protein as determined by the LAL method.

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation** Lyophilized from a 0.2 μm filtered solution of PBS, 150mM NaCl, pH 7.4.

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed manual.

**Reconstitution** Please refer to the printed manual for detailed information.

### Data

> 95 % as determined by reducing SDS-PAGE.

A Reliable Research Partner in Life Science and Medicine

Insulin-like growth factor-binding protein 7(IGFBP-7) is a secreted glycosylated protein that contains three protein domain modules. IGFBP7 contains an N-terminal IGFBP domain, followed by a Kazal-type serine proteinase inhibitor domain and a C-terminal immunoglobulin-like C2-type domain. Human and mouse IGFBP7 are highly homologous and share 94% as sequence identity. It is expressed in many normal tissues and in cancer cells. It is abundantly expressed in high endothelial venules (HEVs) of blood vessels in the secondary lymphoid tissues. It binds IGF and insulin with very low affinity and has been shown to enhance the mitogenic actions of IGF and insulin. IGFBP7 also has IGF/insulinindependent activities. It interacts with heparan sulfate proteoglycans, type IV collagen, and specific chemokines. It supports weak cell adhesion, promotes cell spreading on type IV collagen, and stimulates the production of the potent vasodilator PGI2. It modulates tumor cell growth and has also been implicated in angiogenesis.
