NFkB-p65 Monoclonal Antibody

Catalog No. E-AB-22016

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description	
Reactivity	Human,Mouse,Rat
Immunogen	Synthetic Peptide
Host	Mouse
Isotype	IgG
Clone	12E8
Purification	Protein A purification
Conjugation	Unconjugated
Formulation	PBS with 0.02% sodium azide and 50% glycerol pH 7.4.
Applications	Recommended Dilution
WB	1:1000-3000
IHC	1:100-1:300
IP	1:100-1:300
Data	

Western Blot analysis of 1) Hela, 2) 293T, 3) HepG2 cells using NFκB-p65 Monoclonal Antibody at dilution of 1:2000. **Observed Mw:65kDa Calculated Mw:60kDa**

Immunohistochemistry of paraffin-embedded Mouse hippocampus tissue using NFκB-p65 Monoclonal Antibody at dilution of 1:200.

Preparation & Storage

Storage

Store at -20°C. Avoid freeze / thaw cycles.

Background

Proteins encoded by the v-Rel viral oncogene and its cellular homolog, c-Rel,are members of a family of transcription factors that include the two subunits of the transcription factor NF κ B (p50 and p65) and the Drosophila maternal morphogen, dorsal. Both proteins specifically bind to DNA sequences that are the same or slight variations of the 10 bp κ B sequence in the immunoglobulin κ light chain enhancer. This same sequence is also present in a number of other cellular and viral enhancers. The DNA binding activity of NF κ B is activated and NF κ B is subsequently transported from the cytoplasm to the nucleus in cells exposed to mitogens or growth factors. cDNAs encoding precursors for two distinct

proteins of the same size have been described, designated p105 and p100. The p105 precursor contains p50 at its N-terminus and a C-terminal region that when expressed as a separate molecule, designated pdI, binds to p50 and regulates its activity.
