Background

This gene encodes a protein that belongs to the inositol phosphokinase (IPK) family. This protein is likely responsible for the conversion of inositol hexakisphosphate (InsP₆) to diphosphoinositol pentakisphosphate (InsP₇/PP-InsP₅). It may also convert 1,3,4,5,6-pentakisphosphate (InsP₅) to PP-InsP₄ and affect the growth suppressive and apoptotic activities of interferon-beta in some ovarian cancers. Alternative splicing results in multiple transcript variants encoding different isoforms.
