## Recombinant Human CD31/PECAM1 Protein (Fc Tag)

Catalog No. PKSH030454

**Note:** Centrifuge before opening to ensure complete recovery of vial contents.

### **Description**

**Synonyms** Platelet endothelial cell adhesion

molecule; PECAM-1; EndoCAM; GPIIA; PECA1; CD31; PECAM1

Species Human

Expression Host

Sequence

Met 1-Lys 601

Accession

Calculated Molecular Weight

Observed molecular weight

Tag

HEK293 Cells

Met 1-Lys 601

EAW94208.1

130-140 kDa

C-hFc

**Bioactivity** Measured by the ability of the immobilized protein to support the adhesion of Jurkat

human acute T cell leukemia cells. When  $8 \times 10^4$  cells/well are added to sCD31-Fc

coated plates (1. 25µg/mL, 100µL/well) in the presence of 20ng/mL PMA,

approximately 20-45% will adhere after 30 minutes at 37°C.

## **Properties**

**Purity** > 95 % as determined by reducing SDS-PAGE.

**Endotoxin**  $< 1.0 \text{ EU per } \mu \text{g of the protein as determined by the LAL method.}$ 

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation** Lyophilized from sterile 100mM Glycine, 10mM NaCl, 50mM Tris, pH 7.5

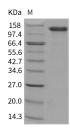

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed manual.

**Reconstitution** Please refer to the printed manual for detailed information.

# Data

> 95 % as determined by reducing SDS-PAGE.

## **Background**

The Cluster of Differentiation 31 (CD31) adhesion molecule, also known as platelet-endothelial cell adhesion molecule-1 (PECAM-1), is the only known member of the CAM family on platelets. CD31 protein is a 130-kDa transmembrane glycoprotein expressed by endothelial cells, platelets, monocytes, neutrophils, and certain T cell subsets. CD31 protein is also expressed in certain tumors, including epithelioid hemangioendothelioma, other vascular tumors, and histiocytic malignancies. CD31 plays a key role in removing aged neutrophils and tissue regeneration. CD31 protein mediates the homotypic or heterotypic cell adhesion by binding to itself or the leukocyte integrin  $\alpha v\beta 3$ , and thus plays a role in neutrophil recruitment in inflammatory responses, transendothelial migration of leukocytes, as well as in cardiovascular development.
