

Recombinant Human APOM Protein (Fc Tag)

Catalog Number:PKSH030622

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms	Apolipoprotein M;Apo-M;ApoM;Protein G3a;APOM;G3A;NG20
Species	Human
Expression Host	HEK293 Cells
Sequence	Met 1-Asn 188
Accession	O95445
Calculated Molecular Weight	45.6 kDa
Observed molecular weight	50 kDa
Tag	C-hFc

Properties

Purity	> 85 % as determined by reducing SDS-PAGE.
Endotoxin	< 1.0 EU per µg of the protein as determined by the LAL method.
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from sterile PBS, pH 7.4 Normally 5 % - 8 % trehalose, mannitol and 0.01 % Tween80 are added as protectants before lyophilization. Please refer to the specific buffer information in the printed manual.
Reconstitution	Please refer to the printed manual for detailed information.

Data

> 85 % as determined by reducing SDS-PAGE.

Background

ApoM (apolipoprotein M) is an apolipoprotein and member of the lipocalin protein family. The lipocalins share limited regions of sequence homology and a common tertiary structure architecture. They have an eight-stranded; antiparallel; symmetrical β -barrel fold; which is in essence a beta sheet which has been rolled into a cylindrical shape. Inside this barrel is located a ligand binding site. They transport small hydrophobic molecules such as steroids; bilins; retinoids; and lipids. Lipocalins have been associated with many biological processes; among them immune response; pheromone transport; biological prostaglandin synthesis; retinoid binding; and cancer cell interactions. Lipocalins are comparatively small in size; and are thus less complicated to study as opposed to large; bulky proteins. They can also bind to various ligands for different biological purposes. ApoM is associated with high density lipoproteins and to a lesser extent with low density

lipoproteins and triglyceride-rich lipoproteins. ApoM is involved in lipid transport and can bind sphingosine-1-phosphate; myristic acid; palmitic acid and stearic acid; retinol; all-trans-retinoic acid and 9-cis-retinoic acid.
