Recombinant Human KIR2DL1/CD158a Protein (Fc Tag)

Catalog Number: PKSH030712

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Properties Purity > 90 % as de Endotoxin < 1.0 EU per Storage Generally, ly -80°C. Record of reconstitut Shipping This product Formulation Lyophilized	
Endotoxin< 1.0 EU per	
Endotoxin< 1.0 EU per	
Storage Generally, ly -80°C. Recommon of reconstitut Shipping This product Formulation Lyophilized	termined by reducing SDS-PAGE.
-80°C. Record of reconstitut Shipping This product Formulation Lyophilized	μ g of the protein as determined by the LAL method.
Formulation Lyophilized	ophilized proteins are stable for up to 12 months when stored at -20 to istituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots ted samples are stable at < -20°C for 3 months.
7 1	is provided as lyophilized powder which is shipped with ice packs.
protectants b	from sterile PBS, pH 7.4 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as efore lyophilization. to the specific buffer information in the printed manual.
Reconstitution Please refer	
Data	to the printed manual for detailed information.

> 90 % as determined by reducing SDS-PAGE.

Background

Killer cell immunoglobulin-like receptor 2DL1 or KIR2DL1 is an inhibitory natural Killer cell immunoglobulin-like receptor with two extracellular immunoglobulin domains. KIR2DL1 is a member of the Killer cell immunoglobulin-like receptor family whose members are classified by the number of the extracellular immunoglobulin domains and the length of the cytoplasm domain. KIR2DL1 is a transmembrane glycoprotein expressed by natural killer cells and subsets of T cells. KIR2DL1 down-regulates the cytotoxicity of NK cells upon recognition of specific class I major histocompatibility complex (MHC) molecules on target cells. It has been reported that the KIR2DL1 bound to its class I MHC ligand; HLA-Cw4. The KIR2DL1-HLA-Cw4 interface exhibits charge and shape complementarity. Specificity is mediated by a pocket

in KIR2DL1 that hosts the Lys80 residue of HLA-Cw4. Many residues conserved in HLA-C and in KIR2DL receptors make different interactions in KIR2DL1-HLA-Cw4 and in a previously reported KIR2DL2-HLA-Cw3 complex. A dimeric aggregate of KIR-HLA-C complexes was observed in one KIR2DL1-HLA-Cw4 crystal.
