Recombinant Human SELP/selectin P/P-selectin Protein (His Tag)

Catalog No. PKSH030758

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description			
Synonyms	CD62;CD62P;GMP140;GRMP;LECAM3;P-Selectin;PADGEM;PSEL		
Species	Human		
Expression Host	HEK293 Cells		
Sequence	Met 1-Ala 771		
Accession	AAN06828.1		
Calculated Molecular Weight	81.3 kDa		
Observed molecular weight	120 kDa		
Tag	C-His		
Bioactivity	Not validated for activity		
Properties			
Purity	> 90 % as determined by reducing SDS-PAGE.		
Endotoxin	< 1.0 EU per μ g of the protein as determined by the LAL method.		
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.		
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.		
Formulation	Lyophilized from sterile PBS, pH 7.4 Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization. Please refer to the specific buffer information in the printed manual.		
Reconstitution	Please refer to the printed manual for detailed information.		
Reconstitution	Please refer to the printed manual for detailed information.

Background

P selectin (SELP) is a 140kDa protein that is stored in the alpha-granules of platelets and Weibel-Palade bodies of endothelial cells. SELP mediates rapid rolling of leukocyte rolling over vascular surfaces during the initial steps in

inflammation through interaction with PSGL1. P selectin is a cell adhesion molecule on the surface of activated endothelial cells. Cellular adhesion molecules are a large family of proteins that attach the cytoskeleton and intracellular signaling cascades with the extracellular environment. SELP is a calcium-dependent receptor for myeloid cells that binds to sialylated forms of Lewis blood group carbohydrate antigens on neutrophils and monocytes. This protein redistributes to the plasma membrane during platelet activation and degranulation and mediates the interacton of activated endothelial cells or platelets with leukocytes.
