# Recombinant Human Cochlin/COCH Protein (short isoform, His Tag)

PKSH031139 Catalog No.

Note: Centrifuge before opening to ensure complete recovery of vial contents.

### **Description**

**Synonyms** COCH-5B2;COCH5B2;DFNA9

**Species** Human

HEK293 Cells **Expression Host** Glu 25-Gln 550 Sequence Accession NP\_001128530.1

Calculated Molecular Weight 59.4 kDa Observed molecular weight 18 kDa Tag N-His

### **Properties**

**Purity** > 92 % as determined by reducing SDS-PAGE.

**Storage** Lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C.

Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of

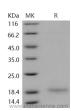

reconstituted samples are stable at < -20°C for 3 months.

Shipping This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation** Lyophilized from sterile PBS, pH 7.4

Reconstitution Please refer to the printed manual for detailed information.

### Data

### **Background**

Cochlin, also known as COCH-5B2 and COCH, is a secreted protein which contains one LCCL domain and two VWFA domains. It is an abundant inner ear protein expressed as multiple isoforms. Its function is also unknown, but it is suspected to be an extracellular matrix component. Cochlin and type II collagen are major constituents of the inner ear extracellular matrix, and Cochlin constitutes 70% of non-collagenous protein in the inner ear, the cochlin isoforms can be classified into three subgroups, p63s, p44s and p40s. The expression of cochlin is highly specific to the inner ear. Eleven missense mutation and one in-frame deletion have been reported in the COCH gene, causing hereditary progressive sensorineural hearing loss and vestibular dysfunction, deafness autosomal dominant type 9 (DFNA9). The co-localization

of cochlin and type II collagen in the fibrillar substance in the subepithelial area indicate that cochlin may play a role in the structural homeostasis of the vestibule acting in concert with the fibrillar type II collagen bundles. Defects in COCH may contribute to Meniere disease which is an autosomal dominant disorder characterized by hearing loss associated with episodic vertigo.
