Recombinant Human Podoplanin/PDPN Protein (His & Fc Tag)

Catalog No. PKSH031284

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms Podoplanin; Aggrus; Glycoprotein 36; Gp36; PA2.26

Antigen;T1-Alpha;T1A;PDPN;GP36

Species Human

Expression Host

Sequence

Met 1-Lys 123

Accession

Q86YL7-1

Calculated Molecular Weight

Observed molecular weight

Tag

HEK293 Cells

Met 1-Lys 123

Q86YL7-1

38.6 kDa

50-55 kDa

C-His-Fc

Bioactivity Immobilized human Podoplanin at 10 µg/mL (100 µl/well) can bind biotinylated

human CLEC1B-His, The EC50 of biotinylated human CLEC1B-His is 0.4-1.0

μg/mL.

Properties

Purity > 95 % as determined by reducing SDS-PAGE.

Endotoxin < 1.0 EU per µg of the protein as determined by the LAL method.

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

Shipping This product is provided as lyophilized powder which is shipped with ice packs.

Formulation Lyophilized from sterile PBS, pH 7.4

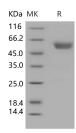

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed manual.

Reconstitution Please refer to the printed manual for detailed information.

Data

> 95 % as determined by reducing SDS-PAGE.

Background

Podoplanin, also known as PDPN, is a type-I integral membrane glycoprotein with diverse distribution in human tissues. The physiological function of this protein may be related to its mucin-type character. The homologous protein in other species has been described as a differentiation antigen and influenza-virus receptor. The specific function of this protein has not been determined. Alternatively spliced transcript variants encoding different isoforms have been identified.PDPN is a mucin-type glycoprotein negatively charged by extensive O-glycosylation and a high content of sialic acid, which expresses the adhesive property. It is selectively expressed in lymphatic endothelium as well as lymphangiomas, Kaposi sarcomas, and in a subset of angiosarcomas with probable lymphatic differentiation. PDPN may contribute to form odontoblastic fiber or function as the anchorage to the tooth development and in proliferating epithelial cells of cervical loop and apical bud. The intensity of podoplanin expression is negatively correlated with the expression of CD34 and factor VIII. Podoplanin would be useful as a diagnostic marker for epithelioid hemangioendothelioma in liver tumors.
