

Recombinant Human Galectin-3/LGALS3 Protein, Low Endotoxin

Catalog Number:PKSH031707

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms	Galectin-3;Gal-3;35 kDa Lectin;Carbohydrate-Binding Protein 35;CBP35;Galactose-Specific Lectin 3;Galactoside-Binding Protein;GALBP;IgE-Binding Protein;L-31;Laminin-Binding Protein;Lectin L-29;Mac-2 Antigen;LGALS3;MAC2;P35;GAL3;GALBP;GALIG;L31;LGALS2;MAC2
Species	Human
Expression Host	E.coli
Sequence	Ala 2-Ile 250
Accession	P17931
Calculated Molecular Weight	27 kDa
Observed molecular weight	32 kDa
Tag	N-His
Bioactivity	Measured by its ability to chemoattract human PBMC using a concentration range of 2.5-25 µg/mL. Note: Results may vary from different PBMC donors.

Properties

Purity	> 95 % as determined by reducing SDS-PAGE.
Endotoxin	< 0.1 EU per µg of the protein as determined by the LAL method.
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8 % trehalose, mannitol and 0.01 % Tween80 are added as protectants before lyophilization. Please refer to the specific buffer information in the printed manual.
Reconstitution	Please refer to the printed manual for detailed information.

Data

> 95 % as determined by reducing SDS-PAGE.

Background

Leukotriene A-4 hydrolase; also known as LTA-4 hydrolase; Leukotriene A (4) hydrolase; LTA4H and LTA4; is cytoplasm protein which belongs to the peptidase M1 family. LTA4H hydrolyzes an epoxide moiety of leukotriene A4 (LTA-4) to form leukotriene B4 (LTB-4). This enzyme also has some peptidase activity. The leukotrienes (LTs) are a

class of structurally related lipid mediators involved in the development and maintenance of inflammatory and allergic reactions. In the biosynthesis of LTs; arachidonic acid was converted into the unstable intermediate epoxide LTA₄; which may in turn be conjugated with glutathione to form the spasmogenic LTC₄; or hydrolyzed into the proinflammatory lipid mediator LTB₄ in a reaction catalyzed by Leukotriene A₄ hydrolase (LTA₄H). LTB₄ is a classical chemoattractant of human neutrophils and triggers adherence and aggregation of leukocytes to vascular endothelium; and also modulates immune responses. As a bifunctional zinc metalloenzyme; LTA₄H also exhibits an anion-dependant arginyl aminopeptidase activity of high efficiency and specificity in addition to its epoxide hydrolase activity. LTA₄H is regarded as a therapeutic target for inflammation.
