# Recombinant Human Prostasin/PRSS8 Protein (His Tag)

Catalog No. PKSH031709

*Note:* Centrifuge before opening to ensure complete recovery of vial contents.

### **Description**

Synonyms CAP1;PROSTASIN

Species Human

Expression Host
Sequence
Ala 30-Arg 322
Accession
NP\_002764.1
Calculated Molecular Weight
Observed molecular weight
Tag
HEK293 Cells
Ala 30-Arg 322
NP\_002764.1
40 kDa
C-His

**Bioactivity** Measured by its ability to cleave the fluorogenic peptide substrate Boc-QAR-AMC

(R&D Systems, Catalog # ES014). The specific activity is > 10 pmoles/min/µg.

# **Properties**

**Purity** > 97 % as determined by reducing SDS-PAGE.

**Endotoxin** < 1.0 EU per µg of the protein as determined by the LAL method.

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation** Lyophilized from sterile PBS, pH 7.4

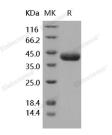

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed manual.

**Reconstitution** Please refer to the printed manual for detailed information.

# Data

> 97 % as determined by reducing SDS-PAGE.

#### **Background**

Prostasin (Prss8), also known as channel activating protease 1 (CAP1), is a trypsinlike serine peptidase, and plays

important roles in epithelial physiology. It is originally purified as an active, soluble enzyme from human seminal fluid and is highly expressed in prostate, lung, kidney, salivary gland and pancreas. Prostasin is expressed as a glycosylphosphatidylinositol (GPI)-anchored membrane protein in prostate epithelial cells, and also exists as a secreted proteolytic enzyme possibly via tryptic cleavage of its COOH-terminal hydrophobic domain. Prostasin is found to activate the epithelial sodium channel (ENaC) which is tightly regulated and is critical for maintaining salt and fluid balance in the lung and kidney in both normal and pathological conditions. Accordingly, prostasin has been proposed as a target for therapeutic inhibition in cystic fibrosis. In addition, prostasin inhibits prostate and breast cancer cell invasion in vitro, suggesting a functional role as a suppressor of tumor invasion, as well as a regulator of gene expression during inflammation.
