

Recombinant Mouse Tie2/CD202b Protein (His Tag)

Catalog Number:PKSM040370

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms	AA517024;Cd202b;Hyk;STK1;Tie-2;Tie2
Species	Mouse
Expression Host	HEK293 Cells
Sequence	Met1-Lys744
Accession	Q02858
Calculated Molecular Weight	82.4 kDa
Observed molecular weight	91 kDa
Tag	C-His
Bioactivity	Measured by its binding ability in a functional ELISA. Immobilized mouse TEK-His at 10 µg/ml (100 µl/well) can bind human Ang2-Fc with a linear range of 6. 25-200 ng/ml.

Properties

Purity	> 95 % as determined by reducing SDS-PAGE.
Endotoxin	< 1.0 EU per µg of the protein as determined by the LAL method.
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from sterile PBS, pH 7.4 Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization. Please refer to the specific buffer information in the printed manual.
Reconstitution	Please refer to the printed manual for detailed information.

Data

> 95 % as determined by reducing SDS-PAGE.

Background

TEK, or TIE-2, is an endothelial cell-specific receptor tyrosine kinase (RTK) that is known as a functioning molecule of vascular endothelial cells. TEK comprises a subfamily of RTK with TIE, and these two receptors play critical roles in vascular maturation, maintenance of integrity and remodeling. Targeted mutagenesis of both Tek and its agonistic ligand, Angiopoietin-1, result in embryonic lethality, demonstrating that the signal transduction pathways mediated by this receptor are crucial for normal embryonic development. TEK signaling is indispensable for the development of the
