

Recombinant Mouse JAM2/CD322 Protein (His Tag)

Catalog Number:PKSM040668

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms	1110002N23Rik;2410030G21Rik;2410167M24Rik;JAM-2;JAM-B;Jcam2;VE-JAM
Species	Mouse
Expression Host	HEK293 Cells
Sequence	Met 1-Asn 236
Accession	NP_076333.3
Calculated Molecular Weight	24.7 kDa
Observed molecular weight	37 kDa
Tag	C-His
Bioactivity	Measured by the ability of the immobilized protein to support the adhesion of Jurkat human leukemic T cells. When 8×10^4 cells/well are added to JAM2-coated plates (0.2 $\mu\text{g/ml}$ and 100 $\mu\text{l/well}$), approximately 35-60% will adhere specifically after 60 minutes at 37°C.

Properties

Purity	> 97 % as determined by reducing SDS-PAGE.
Endotoxin	< 1.0 EU per μg of the protein as determined by the LAL method.
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from sterile PBS, pH 7.4 Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization. Please refer to the specific buffer information in the printed manual.
Reconstitution	Please refer to the printed manual for detailed information.

Data

> 97 % as determined by reducing SDS-PAGE.

Background

Junctional adhesion molecule B (JAM-B), also known as Junctional adhesion molecule 2 (JAM2), Vascular endothelial junction-associated molecule (VE-JAM), and CD322, is a single-pass type I membrane protein which belongs to the immunoglobulin superfamily. It is prominently expressed on high endothelial venules. expression to be restricted to the

high endothelial venule of tonsil and lymph nodes. The localization to the endothelium of arterioles in and around inflammatory and tumor foci. JAM-B can function as an adhesive ligand for the T cell line J45 and can interact with GM-CSF/IL-4-derived peripheral blood dendritic cells, circulating CD56(+) NK cells, circulating CD56(+)CD3(+) NK/T cells, and circulating CD56(+)CD3(+)CD8(+) cytolytic T cells. JAM-2 is expressed on high endothelial venules (HEVs) in human tonsil and on a subset of human leukocytes, suggesting that JAM-2 plays a central role in the regulation of transendothelial migration. It binds to very late activation antigen (VLA)-4, a leucocyte integrin that contributes to rolling and firm adhesion of lymphocytes to endothelial cells through binding to vascular cell adhesion molecule (VCAM)-1. JAM-B appears to contribute to leucocyte extravasation by facilitating not only transmigration but also rolling and adhesion. JAM-B acts as an adhesive ligand for interacting with a variety of immune cell types and may play a role in lymphocyte homing to secondary lymphoid organs.
