

Anti-SARS-CoV Nucleoprotein / NP Monoclonal Antibody

Catalog Number:E-AB-V1342

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Reactivity	SARS
Immunogen	Recombinant SARS-CoV Nucleoprotein/NP Protein (His Tag)
Host	Mouse
Isotype	IgG1
Clone	08
Purification	Protein A Affinity
Conjugation	Unconjugated
Formulation	0.2 µm filtered solution in PBS

Applications Recommended Dilution

WB	1:1000-1:5000
ELISA	1:5000-1:10000

Data

Western Blot analysis of Recombinant SARS-CoV Nucleoprotein/NP Protein(PKSV030248 with 50ng and 15ng) using Anti-SARS-CoV Nucleoprotein / NP Monoclonal Antibody at dilution of 1:2000.

Preparation & Storage

Storage Store at -20°C. Avoid freeze / thaw cycles.

Background

Coronaviruses are enveloped viruses with a positive-sense RNA genome and with a nucleocapsid of helical symmetry. Coronavirus nucleoproteins localize to the cytoplasm and the nucleolus, a subnuclear structure, in both virus-infected primary cells and in cells transfected with plasmids that express N protein. Coronavirus N protein is required for coronavirus RNA synthesis, and has RNA chaperone activity that may be involved in template switch. Nucleocapsid protein is a most abundant protein of coronavirus. During virion assembly, N protein binds to viral RNA and leads to formation of the helical nucleocapsid. Nucleocapsid protein is a highly immunogenic phosphoprotein also implicated in viral genome replication and in modulating cell signaling pathways. Because of the conservation of N protein sequence and its strong immunogenicity, the N protein of coronavirus is chosen as a diagnostic tool.
