Background

For Research Use Only

IGFBP5 (Insulin Like Growth Factor Binding Protein 5) is a Protein Coding gene. Diseases associated with IGFBP5 include Insulin-Like Growth Factor I and Renal Osteodystrophy. Among its related pathways are Myometrial Relaxation and Contraction Pathways and Senescence and Autophagy in Cancer. Gene Ontology (GO) annotations related to this gene include fibronectin binding and insulin-like growth factor I binding. An important paralog of this gene is IGFBP3.
