## **Recombinant Human Siglec-8 (C-Fc)**

Catalog Number: PKSH033950

Note: Centrifuge before opening to ensure complete recovery of vial contents.

#### **Description**

Synonyms Siglec8;Siglec-8;SAF2;SAF2;SAF-2;CD329 antigen;CDw329

Species Human

Expression HostHEK293 CellsSequenceMet17-Ala363AccessionQ9NYZ4Calculated Molecular Weight64.7 kDaObserved molecular weight80-100 kDa

#### **Properties**

Tag

**Purity** > 95 % as determined by reducing SDS-PAGE.

C-Fc

**Endotoxin** < 1.0 EU per µg of the protein as determined by the LAL method.

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation** Lyophilized from a 0.2 μm filtered solution of PBS, pH 7.4.

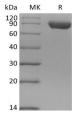

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed manual.

**Reconstitution** Please refer to the printed manual for detailed information.

#### Data

> 95 % as determined by reducing SDS-PAGE.

### **Background**

Siglec-8 is also known as SIGLEC8, SAF2, SIGLEC-8, SIGLEC8L and sialic acid binding Ig like lectin 8, is an approximately 75 kDa transmembrane glycoprotein in the Siglec family of sialic acid-binding immune regulatory molecules. Siglec-8 is expressed on eosinophils, basophils, and mast cells, and it shows a binding preference for the carbohydrate 6-O sulfated sLex. At the tissue level, Siglec-8 mRNA was found to be most highly expressed in lung, PBMCs, spleen, and kidney. Mature human Siglec-8 consists of a 347 amino acid (aa) extracellular domain (ECD) with three Ig-like domains, a 21 aa transmembrane segment, and a 115 aa cytoplasmic domain with two tyrosine based signaling motifs. Alternative splicing generates additional isoforms that either lack most of the second Ig-like domain or have a substituted cytoplasmic domain without the signaling motifs. Cross-linking of Siglec-8 inhibits Fc epsilon RI alpha

induced mast cell degranulation (9). It also induces eosinophil apoptosis, an effect which is enhanced by the eosinophilactivating cytokines IL-5, IL-33, and GM-CSF.
