Note: Centrifuge before opening to ensure complete recovery of vial contents.

| Description |  |
| :--- | :--- |
| Reactivity | Human,Mouse,Rat |
| Immunogen | Recombinant fusion protein of human PSMB5 |
| Host | Rabbit |
| Isotype | IgG |
| Purification | Affinity purification |
| Conjugation | Unconjugated |
| Formulation | PBS with $0.02 \%$ sodium azide,50\% glycerol,pH7.3. |
| Applications | Recommended Dilution |
| WB | $1: 500-1: 2000$ |
| IF | $1: 50-1: 200$ |
| Data |  |

Western blot analysis of extracts of various cell lines using PSMB5 Polyclonal Antibody at 1:1000 dilution.
Observed Mw:21kDa Calculated Mw:17kDa/21kDa/28kDa

## Preparation \& Storage

Storage Store at $-20^{\circ} \mathrm{C}$. Avoid freeze / thaw cycles.

## Background

The proteasome is a multicatalytic proteinase complex with a highly ordered ring-shaped 20S core structure. The core structure is composed of 4 rings of 28 non-identical subunits; 2 rings are composed of 7 alpha subunits and 2 rings are composed of 7 beta subunits. Proteasomes are distributed throughout eukaryotic cells at a high concentration and cleave peptides in an ATP/ubiquitin-dependent process in a non-lysosomal pathway. An essential function of a modified proteasome, the immunoproteasome, is the processing of class I MHC peptides. This gene encodes a member of the proteasome B-type family, also known as the T1B family, that is a 20 S core beta subunit in the proteasome. This catalytic subunit is not present in the immunoproteasome and is replaced by catalytic subunit 3 i (proteasome beta 8 subunit). Multiple transcript variants encoding different isoforms have been found for this gene.
