Background

MSRB2 (Methionine Sulfoxide Reductase B2) is a Protein Coding gene. Diseases associated with MSRB2 include Myotonia Congenita and Coffin-Siris Syndrome 1. Among its related pathways are Protein repair and Metabolism of proteins. Gene Ontology (GO) annotations related to this gene include DNA-binding transcription factor activity and peptide-methionine (R)-S-oxide reductase activity. An important paralog of this gene is MSRB3.
