### **Antigen Information**

**Alternate Names** Interleukin-10,IL-10,Cytokine synthesis inhibitory factor,CSIF

**Uniprot ID** P22301 Gene ID 3586

**Background** IL-10 was originally described as Cytokine Synthesis Inhibitory Factor (CSIF) by virtue of its

> ability to inhibit cytokine production by Th1 clones. IL-10 shares over 80% sequence homology with the Epstein-Barr virus protein BCRFI. The biological activities of IL-10 include inhibition of macrophage-mediated cytokine synthesis, suppression of the delayed type hypersensitivity response, and stimulation of the Th2 cell response, which results in elevated antibody production.

## Recommended usage

Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5 μL of antibody per test (million cells in 100 μL staining volume or per 100 μL of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.
