A Reliable Research Partner in Life Science and Medicine

## **SMCC Activated PerCP**

Cat. No: E-FN-S104 Size: 100µg / 500µg

## **Technical Information**

Description PerCP (Peridinin-chlorophyll-protein complex) is isolated from Dinophyceae sp. It has a high

> quantum efficiency and a large Stokes shift. It is well excited at 488 nm with its maximum emission peak at 677nm. PerCP protein is commonly used for fluorescent immunolabeling, particularly in applications involving fluorescent-activated cell sorting. Its cyanine tandem conjugates (such as PerCP-Cy5.5) can be excited with a standard 488 nm laser and emits in the far red at a longer wavelength for multicolor flow cytometric analysis of cells. These multiple emission wavelengths make PerCP- Cyanine conjugates potentially useful fluorochromes for

multicolor analysis.

Form Lyophilized Molecular Weight 35 kDa **Absorption Maximum** 477 nm **Emission Maximum** 678 nm

Extinction Coefficient 4.06×10<sup>5</sup>cm<sup>-1</sup>M<sup>-1</sup>

Reconstitute Reconstitute whole bottle of SMCC-PerCP with your conjugate buffer to adjust the concentration

for further use.

**Buffer** Lyophilized SMCC-PerCP powder is prepared in 10 mM K-P buffer with sugar as additive. No

ammonium sulfate or other material that may interfere conjugation is contained in this product.

### **Spectra**

# PerCP Excitation and Emission Spectra 100 \_80 Normalized (%) 20 350 450 750

Wavelength (nm)

Fax: 1-832-243-6017

Storage -20°C, shading light

**Shipping** Blue ice **Expiration date** 6 months
