A Reliable Research Partner in Life Science and Medicine

## **SMCC Activated Peroxidase (HRP)**

Cat. No: E-FN-S101 Size: 100µg / 1mg

## **Technical Information**

**Description** Maleimide Activated Horseradish Peroxidase (HRP) is commonly used to facilitate the

conjugation of HRP to proteins, peptides and ligands that contain sulfhydryl (-SH) groups for use as an enzyme-linked detection reagent. This product consists of HRP that has been modified with the hetero bi-functional cross linker Sulfo-SMCC and it generally contains several maleimide groups per HRP molecule while maintaining most of the HRP activity. After conjugation, the activated HRP will form a covalent interaction with the peptides or ligands containing sulfhydryl groups and can be used as a HRP probe for detection in different assays such as ELISA and

western blot etc.

Form Lyophilized Molecular Weight 40 kDa Activation Method Sulfo-SMCC

**Binding capacity** 2-4 mg of peptide (average MW of 1000-3000) per 2 mg HRP

**Reconstitute** Reconstitute in distilled water at the concentration of 2-5 mg/mL with gentle stirring.

Storage -20°C, shading light

**Shipping** Blue ice **Expiration date** 6 months
