### **Antigen Information**

Alternate Names	V7, P126
Uniprot ID	Q93033
Gene ID	9398
Background	CD101 is a type I transmembrane glycoprotein, known as V7, and P126. It is a 120 kD
	homodimer, the member of EWI family within Ig superfamily. CD101 is found on monocytes,
	granulocytes, dendritic cells, a subpopulation of peripheral blood T cells and activated T cells. It
	has been reported that CD101 expressing Tregs posses higher inhibitory function. The biological
	function of CD101 is still not clear. But it has been found that BB27 antibody is able to inhibit T
	cell proliferative responses and this inhibitory function can be overcome by high doses of IL-2.
	Activation of CD101 on dendritic cells is able to induce IL-10 production.

#### Conjugation: PE/Cyanine7

PE/Cyanine7 is designed to be excited by the Blue (488 nm), Green (532 nm) and yellow-green (561 nm) lasers and detected using an optical filter centered near 775 nm (e.g., a 780/60 nm bandpass filter).

### **Recommended usage**

Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5  $\mu$ L of antibody per test (million cells in 100  $\mu$ L staining volume or per 100  $\mu$ L of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.
